Tachosys digipostpro Terminal

Why this device is recommended and how easy it is to use

www.cartracker.sk

Where digipostpro is used

- Transport companies with their own depot
- Logistic centers
- Company parking lots and garages
- Locations with regular driver movement
- Mobile workplaces (when using mobile data)
- The terminal is a wall-mounted station for drivers and technicians
- Driver card reader + dock for digivu key
- Automatic data transfer to a server service or computer
- Easy installation, minimal maintenance

Three connection options

1. LAN - 2. WiFi

Most stable solution

Ideal for permanently installed stations

Supports DHCP and static IP

3. Mobile data (4G)

For locations without LAN/WiFi

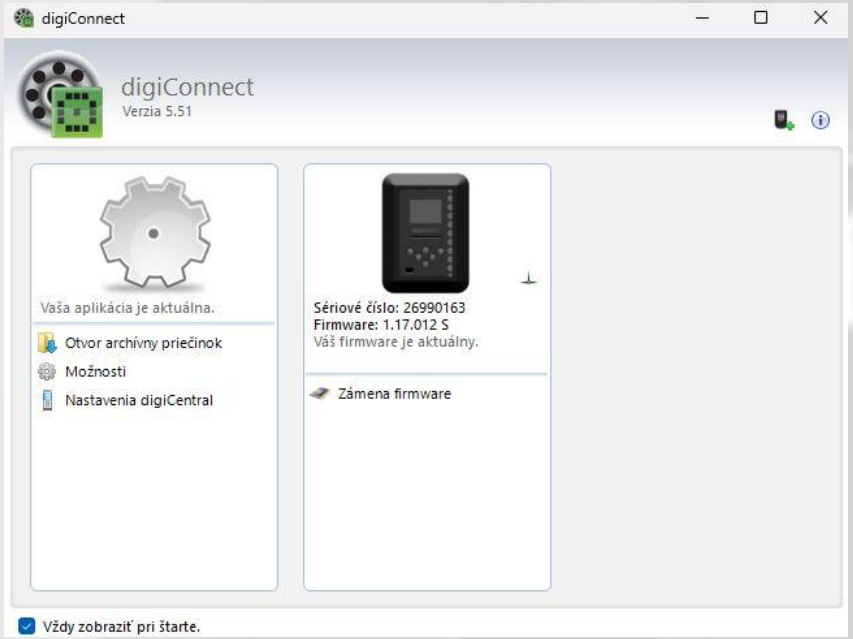
Suitable for mobile or temporary workplaces

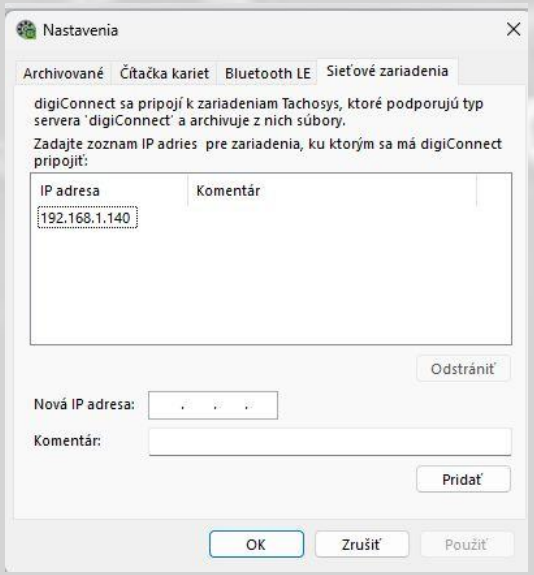
Secure transmission via encrypted connection

LAN / WiFi connection

- Connection via digiConnect – included free with the terminal

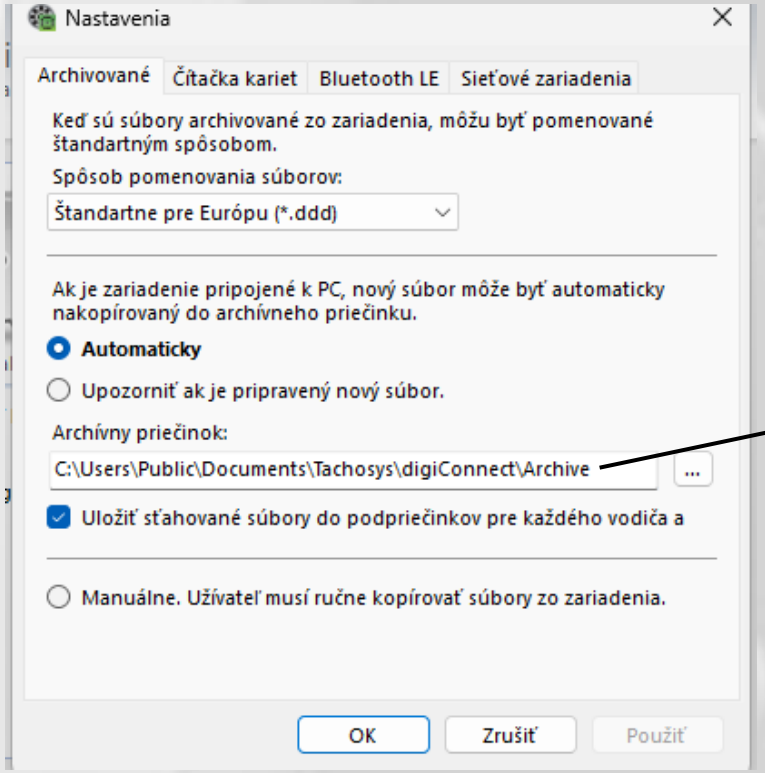
Connection type is set in the terminal, IP address is configured in digiConnect.

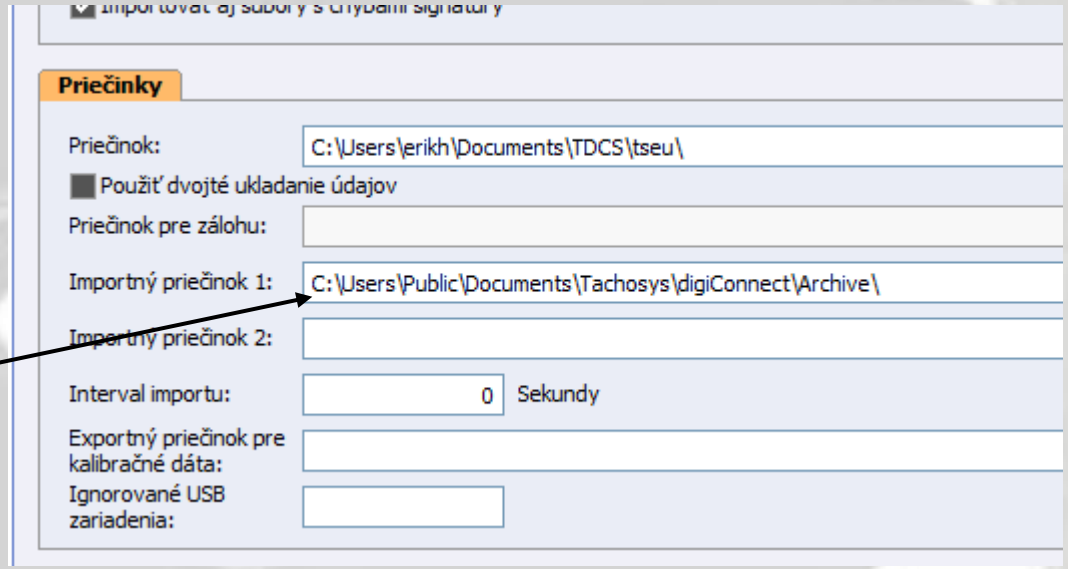


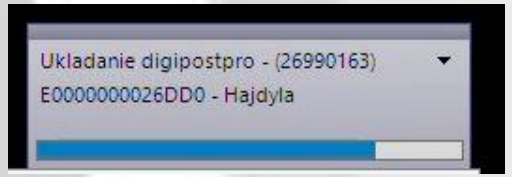


LAN / WiFi connection

- The terminal has its own memory. If digiConnect is not running, downloaded files are stored.
- When digiConnect starts, all pending files are copied to the PC
- CarTracker processes them according to the configuration.





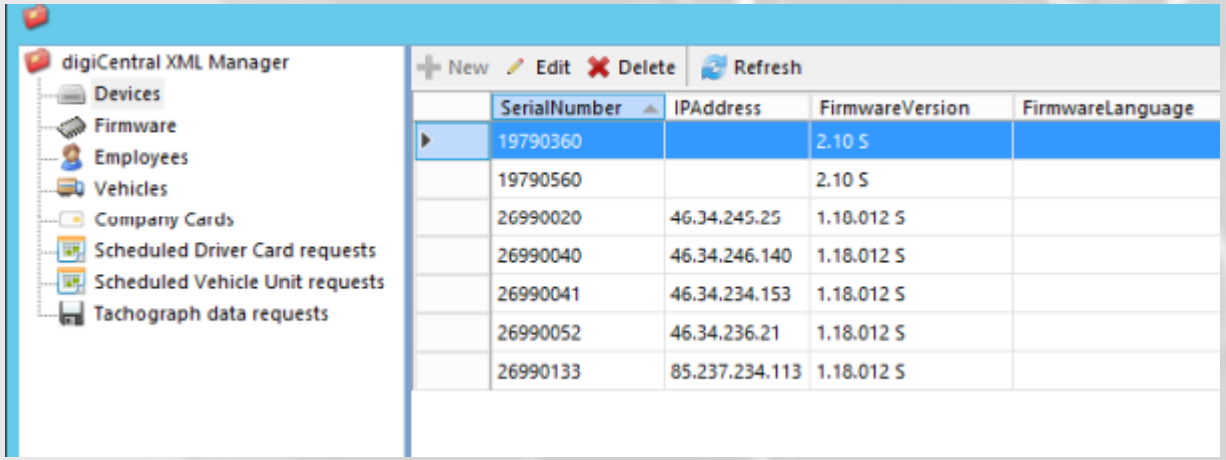


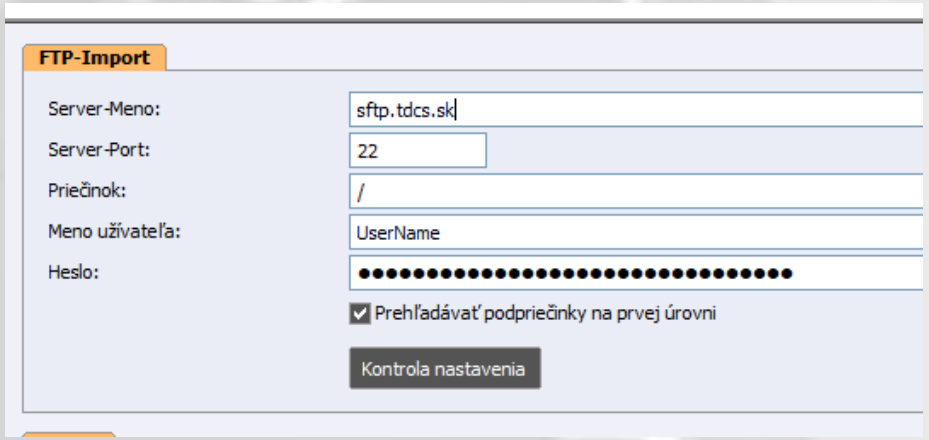
4G mobile network connection

- Mobile connection requires the digiCentral software server

DigiCentral is not included with the terminal. Must be installed on a continuously running server computer. Internet connection must have a static IP. Router must forward traffic to the server's IP.

The digiCentral server can be ordered as a service from our company or the manufacturer. Annual service fee applies. Customer may use their own SIM card. CarTracker imports files via FTP.





Changing the connection type

- LAN / WiFi / 4G connection can be changed by simply swapping plug-in modules

  Can be changed anytime during the terminal's lifetime if needed
